Lucas Oliveira

Software Engineer | Backend & Full-Stack Developer

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building and running a production SaaS platform in the education sector. Strong foundation in Java and Spring Boot, plus full-stack work with Node.js, Next.js, React Native and Firebase. Experienced in payment gateway integrations, webhook-driven backends, LLM-powered features with real-time streaming, and deploying to Linux servers. Security-minded, with working knowledge of authentication, access control and the OWASP Top 10. Currently expanding into Data Engineering and application security.

PROFESSIONAL EXPERIENCE

Software Developer — Atlas Education (Atlas Med / Atlas Health) *2026 – Present*

Medical education SaaS with an AI study assistant, question bank, anatomical atlas, flashcards and performance dashboards.

- **AI features:** helped consolidate the AI assistant (Dr. Atlas) into a single system-prompt-driven service with nine output modes and Server-Sent Events (SSE) streaming, significantly reducing time-to-first-byte.
- **Payments & billing:** integrated Mercado Pago and Asaas for PIX and recurring subscriptions; built webhook handlers for confirmed payments, including affiliate commission attribution and coupon redemption logic.
- **Server-side tracking:** implemented Meta Conversions API events fired from payment webhooks (Node.js), replacing unreliable client-side conversion tracking.
- **Infrastructure:** deployed and maintained production services on a Linux VPS with Nginx as reverse proxy and PM2 process management; Firebase/Firestore as the main data layer.
- **Security:** reviewed and hardened Firestore Security Rules (flagged as the highest-priority security item), kept credentials in environment variables and validated payment status server-side before granting access.
- **Internal tools (Next.js):** built an automated video pipeline (Whisper transcription, silence removal, Remotion rendering) and an AI carousel generator with PNG export via Playwright.
- **Frontend & product:** rebuilt the admin dashboard with a custom design system, worked on a performance-focused landing page and simplified the sign-up/checkout flow; PDF generation pipelines with ReportLab, Playwright and WeasyPrint.
- **Mobile:** contributing to the Atlas Education Hub multi-app ecosystem built with React Native, Expo and Supabase.

PROJECTS

E-Commerce Backend API — Java / Spring Boot *Personal Project / GitHub | Mar 2026 – Present*

- **Authentication & Security:** stateless authentication with JWT and Spring Security, protected endpoints and secure handling of user data.
- **Database:** designed and optimized a MySQL schema for product catalog, user profiles and order history using Spring Data JPA.
- **REST API:** built and tested RESTful endpoints with Postman for frontend/backend communication.
- **Versioning:** managed the full lifecycle with Git and GitHub, with modular structure and documentation.

SECURITY FUNDAMENTALS

- **Web security:** OWASP Top 10 (injection, broken access control, XSS, CSRF), input validation and parameterized queries.
- **Identity:** JWT, session vs. stateless auth, password hashing (BCrypt), role-based access control, principle of least privilege.
- **Infrastructure:** HTTPS/TLS with Nginx, secrets management with environment variables, basic Linux server hardening and log review.
- **Backend practices:** server-side validation of webhooks and payments, database security rules, dependency updates.

TECHNICAL SKILLS

Languages:	Java, JavaScript / TypeScript, SQL, Python (basic)
Backend:	Spring Boot, Spring Security, Spring Data JPA, Node.js, REST APIs, Webhooks, SSE
Frontend & Mobile:	React, Next.js, React Native, Expo
Databases & Cloud:	MySQL, Firebase / Firestore, Supabase (PostgreSQL)
DevOps & Tools:	Git, GitHub, Linux, Nginx, PM2, Postman, VS Code
Integrations:	Mercado Pago, Asaas, Meta Conversions API, LLM APIs, Whisper, Remotion, Playwright

EDUCATION

Federal University of Technology – Paraná (UTFPR) — B.Sc. in Software Engineering *In progress*

Focus on software architecture, database theory and advanced programming logic; active in logic assessments and computing history research.

LANGUAGES

Portuguese: Native | **English:** Advanced | **German:** Basic | Nationality: Brazilian (German naturalization in progress)
